Key Findings - 2004 through 2018/2020

This section of the report presents the key findings of the demographic information and the community indicators for the St. Charles County youth population, and in some cases, for the general population. A handful of tables and figures are presented in the narrative section, with the tables referenced in the narrative included in the Appendix. Due to spacing limitations, some years were not included in the tables.

The demographic information about the St. Charles County youth population is presented first to foster understanding of how to specialize or gear services, resources, and educational opportunities. After the demographic section, the community indicator data is presented in one of four categories based on the trends reported from 2004 through 2018 (2019/2020 reported if data is available). These four categories are:

- Economic Well-being (page 6)
- Health – Physical (page 8)
- Health – Behavioral (page 9)
- Education (page 12)

Trends were analyzed per community indicator and classified as being an area that needs attention, shows a mixed result, or is considered a strength.

Community indicators identified as “Strengths” have data trends that are very promising and/or positive. Both long-term and short-term trends were reviewed to assess how an indicator has been performing in St. Charles County. In addition, an indicator could be perceived as a strength if the county performed better than the state and/or other comparative regions that are presented throughout this report. These are areas that should be celebrated, duplicated, and replicated if underlying interventions/strategies can be identified that may have attributed to the positive impact.

Community Indicators labeled as a “Mixed Result” means that the county data was not conclusive as to what may have occurred. For example, the long-term trend may be a positive, but the 1-, 3-, and/or 5-year trends may be lagging. Mixed results could also be tied to an indicator where the trend was showing promise, but demonstrated a struggling youth population in comparison to other local regions or with the state. Mixed results can shed light on community changes, interventions, processes, or policies that could be moving the mark, but require continued resources and services to remain on this positive trend and/or to move closer to the rates of comparative regions. In some cases, it may lead to research to understand what factors may be contributing to what could be perceived as problematic in a community.

A community indicator that “Needs Attention” means that the data may have diminished or gotten worse over time, and/or the data were not comparable to local regions or the state. This could also happen if the trends had been relatively stable over time, but the recent trends (last 1-5 years) were possibly negative. These indicators need special attention, resources, and/or services to resolve.

A separate section of this report has been prepared for the Missouri Student Survey data relating to various behavioral health needs of St. Charles County students.

IMPORTANT NOTE ABOUT INTERPRETING DATA IN THE TABLES

Various tables will be presented in this report and in the Appendix. Many tables include a column with the heading “Diff.”, which means the difference between the first and last data point for the specified years provided. When “% Ch” is used, it means the percentage of change that has occurred over time with the numbers presented, typically from the first to the last data point for the specified years. Column headings for “1-YR”, “3-YR”, and “5-YR”, were used to show the percentage change in the most recent 1-year, 3-year and/or 5-year period of time. For many community indicators, colors were used to highlight the trends where green identifies a positive trend, and red identifies a negative trend.

St. Charles County, Missouri Population and Demographics (Appendix Tables 12 through 18)

The total population of St. Charles County, Missouri increased by 22.0% from 2004 (319,729) to 2018 (389,985). The St. Charles County youth population (under 18 years) increased in number by 5.2% from 2004 (88,056) to 2018 (92,666). As of 2018, there were 4,610 additional youth under the age of 18. Youth under 18 years old made up 23.8% of the St. Charles County population in 2018 (Table 1 and 12).

Table 1: Population Numbers 2018 – Missouri and St. Charles County

	Missouri	St. Charles
Total Population	6,090,062	389,985
Child Population - under 18	1,376,830	92,666
Children -% of Population	22.7%	23.8%
Child Population - under 6	447,782	28,622
Children under 6 -% of population	7.3%	7.2%
Minority child population under 18	349,664	14,437
Percent minority children under 18	25.4%	15.6%
Minority child population under 6	117,844	4,474
Percent minority children under 6	26.3%	15.6%

Source: USDC, Bureau of the Census; Missouri Office of Administration, Division of Budget and Planning.

The percentage of the population who were minority children changed from 9.6% (8,424) in 2004 to 15.6% (14,437) in 2018 (Table 15). With a 71.4% increase in the number of minority children in this period of time, the youth population has become more diverse. Across all ages, 89.9% of the residents were white, 5.1% were black, 2.7% were Asian, 2.0% were two or more races, with 3.4% of the population Hispanic. Looking at Table 2 below, you'll notice that each of the age ranges, below 19 years, had a smaller percentage that were white, and a larger percentage of its youth who were black, two or more races, and/or Hispanic.

Table 2: Numbers and Percentage of Races -Total Population and by Age (for youth) in St. Charles County, Missouri -2018

St. Charles	Total	White		Black		Asian		Two or More Races		Hispanic	
All Ages	399,182	358,794	89.9%	20,376	5.1%	10,773	2.7%	8,018	2.0%	13,374	3.4%
Age 0 to 4	23,483	20,266	86.3%	1,370	5.8%	696	3.0%	1,088	4.6%	1,100	4.7%
Age 5 to 9	25,735	22,280	86.6%	1,340	5.2%	782	3.0%	1,252	4.9%	1,334	5.2%
Age 10 to 14	27,203	23,535	86.5%	1,588	5.8%	783	2.9%	1,217	4.5%	1,490	5.5%
Age 15 to 19	25,881	22,591	87.3%	1,622	6.3%	635	2.5%	954	3.7%	1,195	4.6%

Source: U.S. Census Bureau; Population Division. For population estimates, please note that the individuals identifying as more than one race were accounted for more than once with the original data source. Per year, the percentage across all the racial categories does not total to 100% due to this duplicate information.

There were 22.8% of children living in single parent households for the five-year period covering 2014-2018, an increase of 4.6% since 2003-2007 (Table 16). The number of children in single parent households increased by 29% (Table 15) from 16,460 (2003-2007) to 21,161 (2014-2018). Since 2013 alone, this number increased by 20%. However, the St. Charles County rate is 10% less than Missouri's rate, and below all of the comparative regions shown in Table 15.

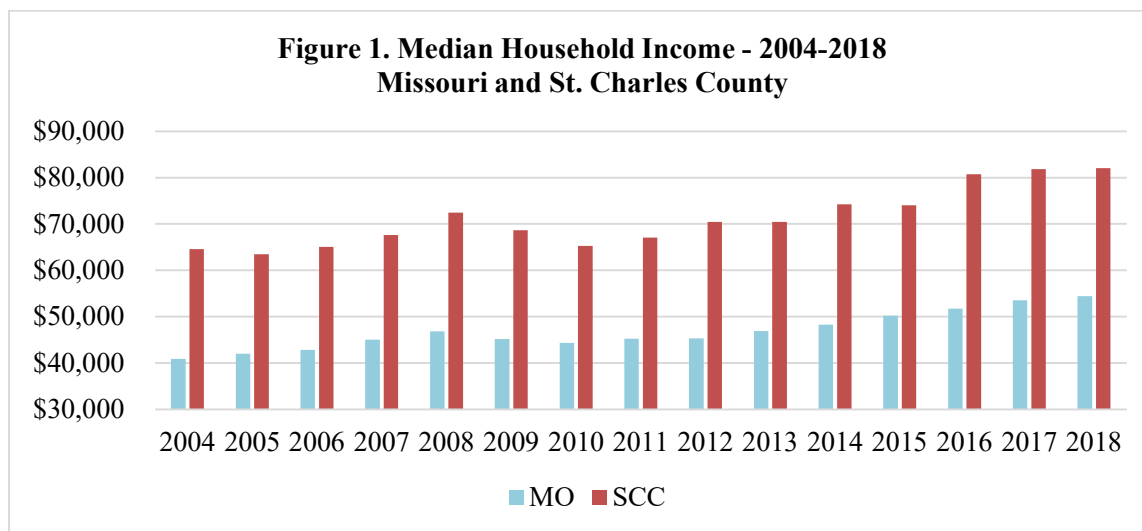

Adult unemployment decreased by 2% since 2004 (4.5% in 2004 to 2.5% in 2018). The adult unemployment rate for 2018 was the lowest it had ever been. The unemployment percentage was also 0.7% lower than the state's rate at 3.2% and was the lowest rate among all of the comparative regions. Since 2009, St. Charles County's unemployment rate had steadily improved (Table 3 and 16).

Table 3: Adult Unemployment Percentage

	2004	2007	2008	2009	2010	2013	2014	2015	2016	2017	2018	Diff.	1-YR	3-YR	5-YR

The St. Charles County median household income in 2018 was \$82,048, an increase of 27% from \$64,581 in 2004; 16% since 2013. The county’s median household income was \$27,000 greater than the state’s median household income of \$54,412 (Figure 1 and Table 17).

Source: SAIPE

Viewing the trends for various disability types among the youth in St. Charles County is critical for proper planning and allocation of resources. This information can be found in Table 18 in the Appendix. Below are the disability types prioritized by their percentage increase over time.

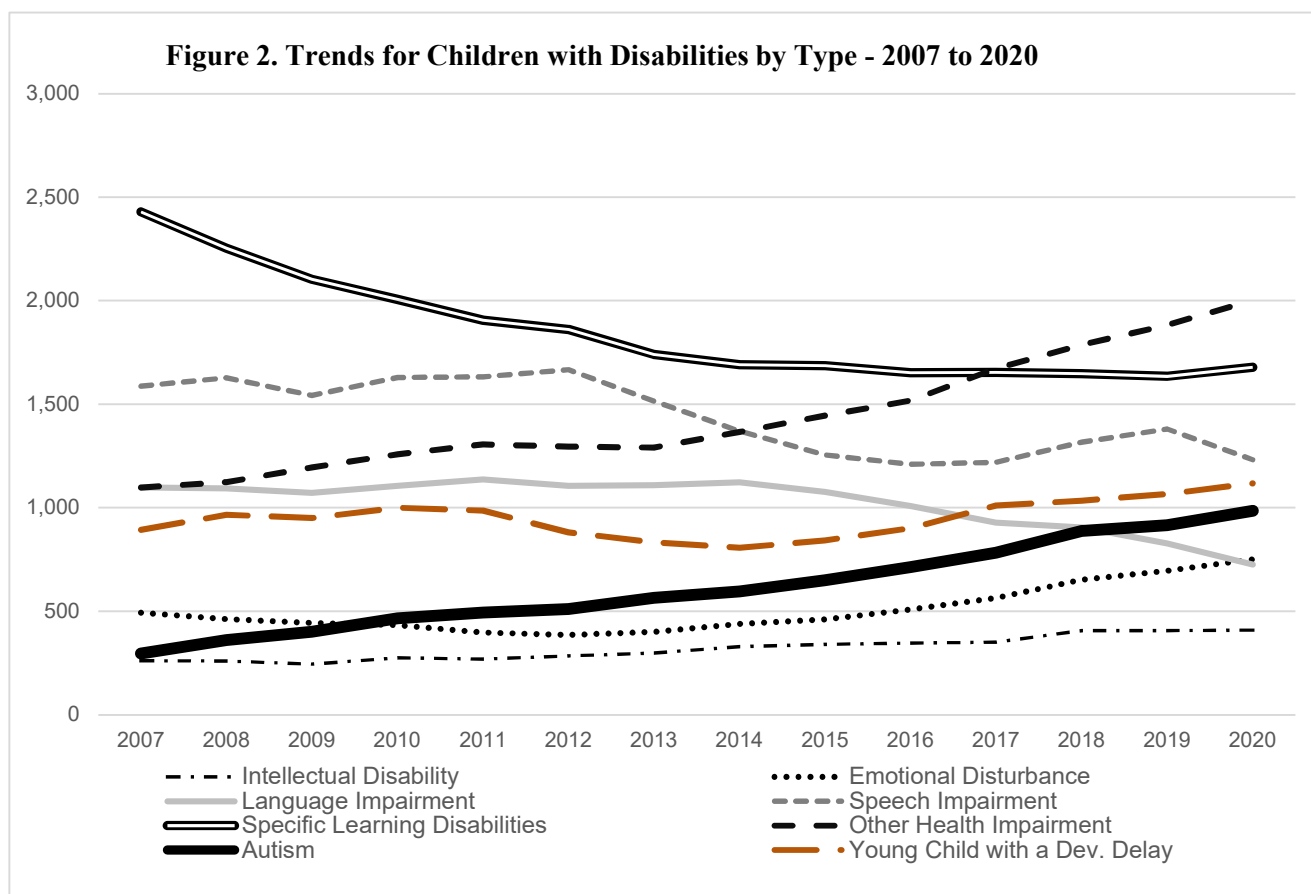

1. Autism surged in the public school districts, with a 233% increase from 2007 to 2020. There were 986 children with an Autism diagnosis in the public schools for 2020.
2. The county experienced an 82% increase in the number of children with other health impairments, which included 2,002 youth for 2020.
3. The third highest increase in disability types was found with intellectual disabilities; an increase of 56.7% since 2007 representing 409 children for 2020.
4. Children with emotional disturbances had increased by 52.3% since 2007, and for 2020 represents 751 youth.
5. There was a 33% increase in the number of children who had multiple disabilities with 108 noted for 2020.
6. Young children with a developmental delay, which includes children age 3 through pre-kindergarten (typically five-year old children) increased by 25.2%. There were 1,118 young children with a developmental delay.

Beyond the generalized disability type categories including other health impairment, the most prevalent disability type was “specific learning disabilities” with 1,679 children (2020); although this type decreased over time by 31%. This was followed in order by these diagnoses: speech impairment (1,232), youth with a developmental delay (1,118), autism (986), emotional disturbance (751), and language impairment (726). The top eight diagnoses/categories are shown in Figure 2. Enrollment figures are also shown in Table 4 for St. Charles County to allow for this comparison.

Table 4: St. Charles County School Enrollment by Grade Level – 2018

SCHOOL ENROLLMENT	St. Charles #	St. Charles %	Missouri %
Population 3 years and over enrolled in school	103,227		1,498,474
Nursery school, preschool	6,913	6.7%	6.3%
Kindergarten	5,343	5.2%	5.0%
Elementary school (grades 1-8)	41,987	40.7%	41.3%
High school (grades 9-12)	21,473	20.8%	20.7%
College or graduate school	27,511	26.7%	26.6%

Economic Well-being (Appendix Tables 19 -30)

Strengths

The number of individuals in poverty for the general population increased 25% from 17,880 in 2004 to 22,272 in 2018 (Table 19). The poverty rate increased by only 0.3% since 2004, and demonstrated positive 3- and 5-year trends (Table 20). By comparison, the state rate of 13.2% was more than double the county rate for 2018.

The youth population age 0-17 increased by 8.7% over this same period of time (91,214 = youth population estimate for 2018; also Tables 19 and 20 and Figure 3).

The number of youths in poverty, ages 0-17, increased from 5,879 in 2004 to 6,411 in 2018, a 9% increase. 7.0% of the youth population was in poverty in 2018 in comparison to 6.9% in 2004.

This represents a minor difference of 0.1% in the percentage of youth age 0-17 in poverty (as a percentage of the youth population). The poverty rate for youths age 5-17 also increased slightly from 6.0 (2004) to 6.3 (2018), representing 4,270 youth.

This poverty rate had positive 3- and 5-year trends as well, although the 1-year trend for all of the poverty categories turned negative.

Source: SAIPE

Similar to the general population poverty trends, the poverty rate for youth 0-17 decreased by 2.3% since 2012, the year where poverty was at its highest. *Due to the COVID-19 situation in 2020, this indicator is one that needs attention despite the trends found through 2018.*

In 2004, 13.3% of the public school student population (6,660 students) was enrolled in the free/reduced price lunch program in comparison to 19.6% (11,321) in 2019 (Table 21). This represents a 70% increase in the number of students enrolled since 2004 and a 6.3% increase in the percentage of students who were enrolled in the free/reduced price lunch program from 2004 to 2019. While this may initially appear as an indicator that needs improvement, other data that was gathered would indicate that this is a strength. First, the county's percentage of students enrolled was 19.6% for 2019 in comparison to the state at 50%. In addition, while the rate had increased by 6.3% in the 16-years covered by the data, the 1-, 3- and 5-year trends were very positive, and had improved at a rate faster than the state. Due to the variation of data within each school district, this data has been presented in Table 25. The school district with the highest percentage of students eligible for this program was St. Charles at 40.4% for 2019, although the 1-, 3-, and 5-year trends were positive. The second highest percentage was found at Orchard Farm at 28.8% for 2019, followed by Fort Zumwalt at 20.6%, Francis Howell at 17.6%, and last, Wentzville at 14.1%. All of the school districts had positive 3- and 5-year trends.

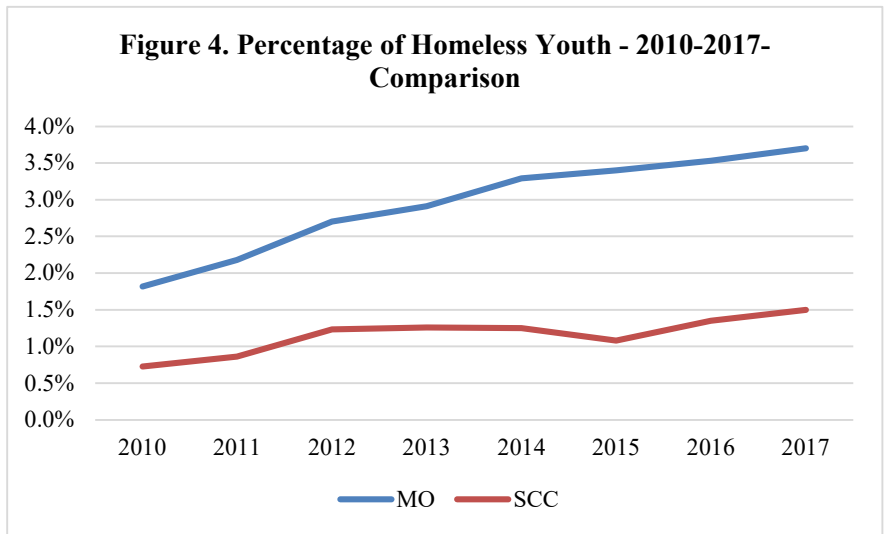

The number and percentage of children in families receiving food stamps increased from 2004 to 2018. In 2018, there were 10,932 children in families receiving food stamps, a change of 18% from 9,229 children in 2004 (Table 26). As a total percentage of children, it increased from 10.5% in 2004 to 11.8% in 2018, an increase of 1.3% (Table 27). Similar to the previous indicator, children in families receiving food stamps may initially appear to be a negative trend. However, a comparative analysis and more recent trends show a different story. First, the percentage of children in families receiving food stamps had very positive 1-, 3-, and 5-year trends. This percentage was the highest in 2012 at 15.5%, a decrease of

3.7% in six years. Furthermore, Missouri reported 31.6% of children in families who received food stamps in 2018, which was more than 2.5 times higher than the county at 11.8%.

Food Insecurity data was not updated past 2017, so based on a review of the data from 2010 to 2017, there was a 26% decrease from 16,070 youths considered “food insecure” to 11,900 for 2017 (Table 28). The percentage improved by 4.8% from 17.6% in 2010 to 12.8% in 2017 (Table 29). This indicator experienced positive 1-, 3-, and 5-year trends. There were 17.5% of Missouri children who were food insecure for 2017, which was considerably higher than the county at 12.8%.

Mixed Result

Youth Homelessness, as measured annually in the public school districts, increased in four of the five districts except St. Charles R-VI (Table 21). However, Francis Howell and Wentzville school districts were showing positive 1-, 3-, and 5-year improvements. The Fort Zumwalt school district demonstrated negative long-term, 1-, 3-, and 5-year trends and should be a focal point for education and resources. The trends found within Orchard Farm should be reviewed as well. In the county overall, the percentage of homeless youth increased from 0.7% in 2010 to 1.2% in 2018, which represents a very low percentage of the youth population (Table 22). For some reason, the state data was not available for 2018, but for 2017, the county’s percentage of homeless youth (1.5%) was less than half the State’s at 3.7%. The number of homeless youth in the county increased from 402 in 2009-2010 count to 687 in the 2017-2018 count, an increase of 71% (Table 23).

Source: Department of Elementary and Secondary Education

An indicator that is a predictor of becoming homeless is if homeowners and/or renters spend more than 30% of their income on their gross household costs, also known as cost-burdened households. Data is presented in Table 5 to show comparisons across three five-year periods for St. Charles County and Missouri. Over time, the percentage of housing units without a mortgage where 30% or more of their income is spent on gross household costs remained relatively the same for Missouri (12%) and St. Charles County (10-11%). A similar trend was found with the percentage of occupied units paying rent for Missouri (ranged from 46-49%) and St. Charles County (ranged from 42-44%).

There were 42% of St. Charles County renters who paid 30% or more of their income on their gross household costs covering 2014-2018; 33% spent 35% or more with 9% of SCC renters paying between 30-34.9%. For Missouri, this was 46% (Table 30). This means approximately 11,164 renter households were at risk of homelessness in St. Charles County. In 2018, 19% of St. Charles County owners with a mortgage spent 30% or more in comparison to 23% of Missouri owners. This represents an additional 15,932 households who were at risk of homelessness in St. Charles County in 2018. In addition, 10% of St. Charles County homeowners without a mortgage spent 30% or more of their income on household costs, putting 3,136 homeowners without mortgages at risk of homelessness (Table 30). In all comparisons, St. Charles County residents were in a better position to avoid homelessness due to their lower percentages, but the impact this issue has on the family could be lessened with additional education, services, and resources related to housing costs.

Table 5: Percent of Housing Cost-burdened Households – Pay 30% or more of Income on Gross Household Costs

Housing Types	2006-2010		2011-2015		2014-2018	
	MO	SCC	MO	SCC	MO	SCC
Housing units with a mortgage	29%	27%	27%	23%	23%	19%
Housing units without a mortgage	12%	10%	12%	11%	12%	10%
Occupied Units Paying Rent	47%	44%	49%	43%	46%	42%

Needs Attention

None of the economic well-being indicators were placed in this section.

Health – Physical (Appendix Tables 31 – 38)

Strengths

The infant mortality rate decreased in number by 25% since the 2000-2004 data collection period (142 to 107; Table 37). The infant mortality rate also decreased from 6.5 out of 1,000 births in 2004 to 4.8 out of 1,000 births in 2017 (Table 38). While the 1- and 3-year trends demonstrated a declining trend, the rate has steadily improved over time, and was significantly less than all but one comparative region shown in Table 6 below.

Table 6: Infant Mortality Rate per 1,000 Live Births

Regions	2006-2010	2007-2011	2008-2012	2009-2013	2010-2014	2011-2015	2012-2016	2013-2017	2014-2018	Diff.	1-YR	3-YR	5-YR
Missouri	7.1	6.9	6.8	6.6	6.4	6.4	6.4	6.4	6.3	-0.8	-0.1	-0.1	-0.3

Source: Missouri Department of Health and Senior Services. Definitions: Number of deaths to infants under one year of age. Data were aggregated over five-year periods in order to provide more stable rates. Rate is per 1,000 live births.

Mixed Result

The number of child deaths (ages 1-14) increased by 471% from 2004 to 2018, a change in the number of deaths from 7 in 2002-2006 to 40 in 2014-2018 (Table 33). Child deaths, ages 1-14, increased from a rate of 2.0 out of 100,000 youth in 2002-2006 to 9.0 out of 100,000 youth in 2014-2018; more than quadrupling in this span of time (see Table 34). It is important to note that the 1-, 3-, and 5-year trends improved, and St. Charles County’s rate was significantly less than all of the comparative regions for 2014-2018 (Table 7).

Table 7: Child deaths, ages 1-14 – Comparative Regions

Regions	2010-2014	2011-2015	2012-2016	2013-2017	2014-2018	Diff.	1-YR	3-YR

Source: Missouri Department of Health and Senior Services.

The number of violent teen deaths (age 15-19) increased by 4 or 11% from 35 in from 2000-2004 to 39 in 2014-2018 (Table 35). Violent deaths, ages 15-19, started at 31.3 deaths per 100,000 youth in 2000-2004, and for 2014-2018 decreased to 30.4 per 100,000 youth, a rate decrease of 0.9 (Table 36). In the last ten years, this rate increased from 24.4 to 30.4 (Table 8). On the positive side, St. Charles' rate was significantly lower than all of the comparative regions, and well below the state rate of 53.5 for 2014-2018 (Table 8). However, all of the 1-, 3-, and 5-year trends for both numbers and rates for violent teen deaths had worsened in St. Charles County.

Table 8: Violent Teen Death Rate, Age 15-19 – Comparative Regions

Regions	2010-2014	2011-2015	2012-2016	2013-2017	2014-2018	Diff.	1-YR	3-YR
Missouri	47.1	47.5	47.5	49.6	53.5	6.4	3.9	6.0

Source: Missouri Department of Health and Senior Services. Definitions: Number of deaths from homicides, suicides, motor vehicle crashes, and other accidents to teens ages 15 to 19. Data were aggregated over five-year periods to provide more stable rates. Rate is expressed per 100,000 teens.

Needs Attention

There was a 16% increase in the number of infants born with low birthweight of 1,389 in 2000-2004 (5-year span) to 1,606 in 2014-2018 (Table 31). The percentage of infants classified with low-birth weight increased by only 0.8%, from 6.4% in 2000-2004 to 7.2% in 2014-2018 (Table 32). This percentage for the county was slightly lower than the state at 8.5%. All of the 1-, 3- and 5-year trends were negative.

Health – Behavioral (Appendix Tables 39 – 56)

Strengths

Births to teens, age 15-19, had a rate decrease from 20.6 out of 1,000 births in 2004 to 7.6 out of 1,000 births in 2018 (Table 40). In 2018, there were 96 births to teens, age 15 – 19, in comparison to 234 births to teens matching this age range for 2004, a decrease of 59% (Table 39). The 3- and 5-year trends starting from 2018 were very positive for both the reported numbers and rates of teen births. It is important to note that while the rate had steadily declined since 2004, the 1-year trend was negative, rising from 7.0 in 2017 to 7.6 in 2018. In comparison to all of the regions shown below, St. Charles ranged from being one-half to one-third of every region's rate.

Table 9: Teen Birth Rate – Age 15-19 – Per 1,000 Youth – Comparative Regions

Regions	2014	2015	2016	2017	2018	Diff.	1-YR	3-YR

Source: Missouri Department of Health and Senior Services.

Juvenile law violation referrals for youth in St. Charles County, ages 10-17 improved from 2004 to 2018. In 2004, it was a rate of 48.2 out of 1,000 youth, ages 10-17 (1,959 youth), and decreased to a rate of 15.3 out of 1,000 applicable youth in 2018 (representing a 66% decrease in the number of youths with law violation referrals, impacting 666 youths; see Table 46 and 47).

St. Charles County had the lowest referral rates among all regional comparisons (others ranged from 25.2 to 43.7 out of 1,000 youth) including Missouri’s rate of 25 out of every 1,000 juveniles. In addition, the 1-, 3-, and 5-year trends reported in Table 47 were all positive within this county.

Positive Trends within Juvenile Law Offenses and Court Referrals (reported for indicators with numbers greater than 30)

All of the offenses that fall under “law” offenses, which includes violent, alcohol, and drugs offenses, decreased in number by 48% or more from 2004 to 2018. There were 248 violent offenses noted in 2018, followed by 91 drug offenses, and 17 alcohol offenses. The 1- and 3-year trends for violent juvenile offenses were the only negative trends found (Table 48).

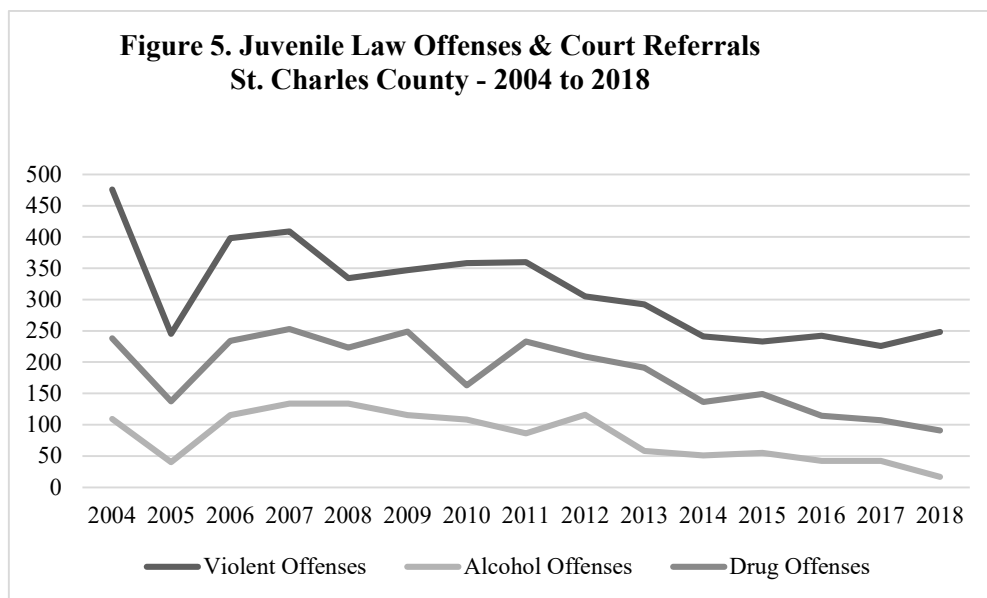

Within “status” offenses, which include truancy, beyond parental control, runaway/absent from home, and injurious behavior, truancy, runaway/absent from home, and injurious behavior decreased by 27% or more since 2004. “Runaway/absent from home” was the most prevalent status offense in St. Charles for 2018 at 158 offenses, but decreased by 50% since 2004.

Within the “abuse/neglect/custody offenses”, neglect offenses decreased by 12% since 2004, with 156 reported custody offenses for 2018.

Negative Trends within Juvenile Law Offenses and Court Referrals

Beyond Parental Control which falls within the “status” offenses increased by 700% since 2004 (from 0 to 7 so interpret with caution) with 7 reported offenses for 2018. Abuse offenses increased by 43% since 2004; from 14 to 20 covering the 15-year span of time.

The number of children entering/re-entering state custody increased 27% from 105 in 2004 to 133 in 2018, with a rate of 1.2 per 1,000 youth in 2004 in comparison to a rate of 1.4 per 1,000 youth in 2018 (Table 44 and 45). This indicator was

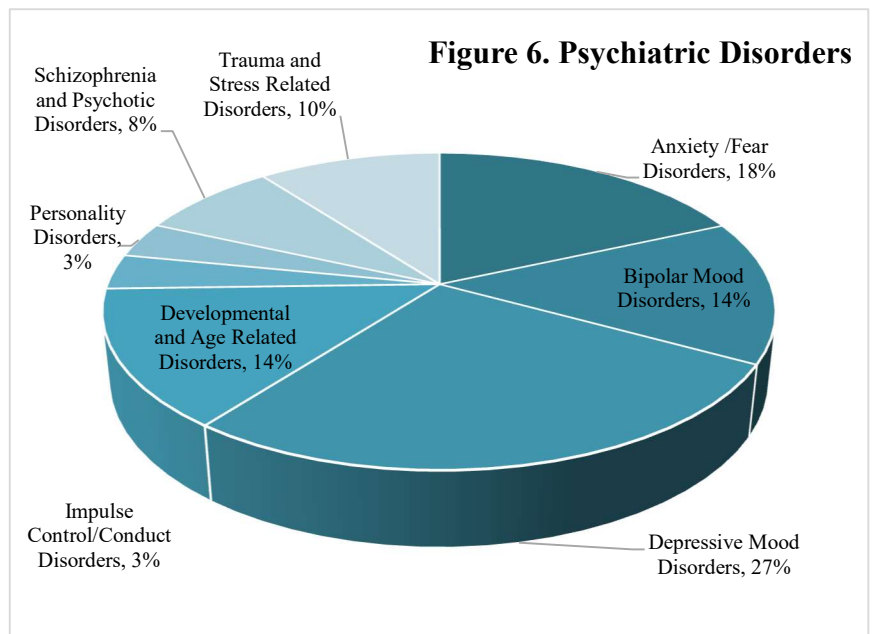

Source: Missouri Department of Social Services.

viewed as a strength due to the minimal rate change covering 15-years, in addition to the positive 3- and 5-year trends or from its height in 2011 and 2012 at 1.8 per 1,000 children. Another indication that this area is a strength was that the state rate of 5.1 per 1,000 was 3.5 times more than County rate of 1.4 in 2018. The data was slightly different with the status report as the source and shows that 77 out of the 131 out-of-home placements had the children removed for reasons outside of alcohol and drug use, with 54 placements made related to parental drug use. There were no cases attributed to just parental alcohol use.

Mixed Result

A couple of new indicators were added to this year’s report including information on the number of children who received psychiatric services from the Division of Behavioral Health, and the breakdown of psychiatric diagnoses for all clients served regardless of their age. As can be seen in Table 50, the number of youths who received psychiatric services from this source had increased at a higher rate than the general population needing services. For the clients under 6 years old, eight (8) children were served in 2009, which increased 288% where 31 were served in 2019. The 6-9 years old children increased 280%; from 71 to 270 covering the same years. Clients, 10 to 13 years old, increased by 218%; from 135 in 2009 to 429 in 2019. There were 142 children who were 14 to 17 years old served in 2009, which increased by 125% to 320 children served in 2019. For all clients served by the Division of Behavioral Health, there was a 97% increase from 1,444 in 2009 to 2,845 served in 2019. Further, children made up a much larger percentage of the total served in 2019. This data supports the increased need for psychiatric services among the children covering all age ranges.

The breakdown of the psychiatric disorders shown in Figure 6 (see Table 49) demonstrates that the majority of the diagnoses for the general population as of 2019 were depressive mood disorder (27%), anxiety/fear disorders (18%), bipolar mood disorders (14%), developmental/age-related disorders (14%), trauma/stress-related disorders (10%), with the remaining disorders present with 10% or less of the client sample.

Source: Status Report on Missouri’s Substance Use and Mental Health; Division of Behavioral Health, Missouri. Note: Individuals who received psychiatric services had one of the disorders listed in the next table.

A variety of data is available for child abuse and neglect cases in St. Charles County. A majority of child abuse and neglect data (see Tables 51 – 52) from 2005 to 2019 showed an increase in the number of reported incidents across type (39%), the number of substantiated incidents (7.0%), and the number of incidents needing family assistance (63.2%), with similar patterns emerging for the number of children involved in child/abuse and neglect substantiated incidents. In 2019, 247 children in St. Charles County were involved in substantiated cases of child abuse and neglect, an increase of 7.9% since 2005, and linked to 184 total incidents (some incidents involved multiple children in the family). An additional 2,052 children required some level of family assistance, which had increased by 52.9% since 2005 and involved 1,342 children. While long-term trends were negative, the 1-, 3-, and 5-year substantiated trends for both the number of substantiated incidents and children improved by 19-31%. Furthermore, the rate of substantiated children per 1,000 had decreased from 3.9 in 2016 to 2.7 per 1,000 children in 2019.

Table 10: Rate of Substantiated Children per 1,000 and Reported per 1,000 for St. Charles County, Missouri – 2015 to 2019

Rate	2015	2016	2017	2018	2019	1-YR	3-YR	4-YR
Substantiated children per 1,000	2.79	3.91	3.12	3.75	2.66	-1.1	-1.3	-0.1
Total children reported per 1,000	34.1	36.9	35.8	36.6	31.7	-4.9	-5.2	-2.4

Source: Missouri Department of Social Services Annual Reports from 2005 to 2019.

Children involved in neglect cases represented 60% of the total type for substantiated child abuse and neglect cases in 2019 (Table 53 and 54). There were 149 children involved in the neglect type, out of the 247 total children reported in 2019. Neglect incidents increased by 22.4% since 2005; from 76 to 93 incidents. The number of children involved in a neglect case increased by 210%; from 48 in 2005 to 149 in 2019. However, the 1-, 3-, and 5-year trends were positive for neglect incidents and children involved in neglect.

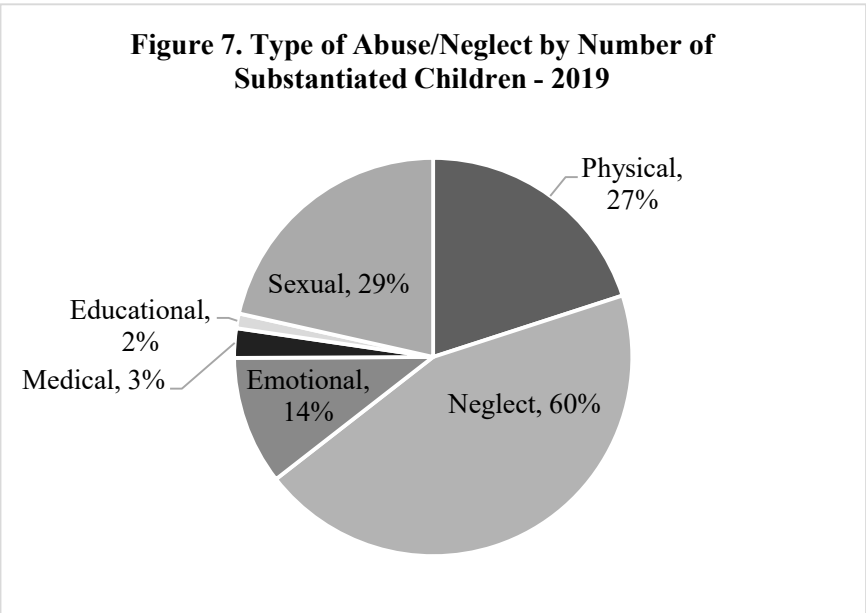

Another important data point comes directly from the public school district program participants. While no identifying information was gathered, students who attended The Child Center’s 4th grade Child Sexual Abuse Prevention Program in 2018-2019 and 2019-2020 were asked if they would like to speak to a school counselor after the class presentation was over. Shown in Tables 55 and 56, 15% or 545 4th grade St. Charles County students selected they would like to speak to a counselor in greater detail about this particular topic in the 2018-2019 school year. This decreased to 12% or 378 4th graders for the 2019-2020 school year (Table 56). Further, school building information is shared so that you can see the varying needs of the buildings for targeted services. This trend demonstrates the need for counseling services to be readily available when this presentation is provided to students.

The number of children involved in sexual abuse cases made up 29% of the total number of substantiated children for 2019, the second highest type experienced by children after neglect. Over this period of time, substantiated sexual incidents increased by 31% (from 52 in 2005 to 68 in 2019). Sexual abuse involved 72 distinct children in 2019, which represented an increase of 29% since 2005 (see Tables 53 and 54).

The number of children involved in physical abuse made up 27% of the total types; the third highest type of abuse experienced in 2019. There were 59 substantiated incidents that occurred in 2019, which involved 67 children. The number of physical abuse incidents and children had increased since 2005, with the 1- and 3-year trends also demonstrating negative findings. The 5-year trend, however, was positive.

Emotional maltreatment was cited in 26 incidents and impacted 35 children for 2019. The number of children affected by emotional maltreatment made up 14% of the total number of substantiated children. Since 2005, emotional maltreatment incidents increased 767%, with the number of children increasing by 1,067%. Due to the small sample size, findings should be interpreted with caution.

Medical incidents were recorded in seven (7) situations involving eight (8) children with a 22% decrease in incidents and 11% decrease in number of children involved since 2005. This type made up only 3% of the number of children involved

Source: Missouri Department of Social Services Annual Reports from 2005 to 2019.

in substantiated abuse/neglect for 2019. However, with such a small sample size, findings should be interpreted with caution.

Educational neglect incidents were substantiated for four children in 2019, but the incident wasn't reported as this type. Trend analysis is not warranted for such a small sample size, which has shown very little change over time.

Data was included this year on the number of youth (under 18) in St. Charles County that were admitted to a substance abuse treatment program through the Division of Behavioral Health (Table 43). There were 16% less youth under 18 years old admitted to a substance abuse treatment program in 2018 (81) than in 2009 (76). Youth made up 8.5% of those admitted in 2018; in 2009, youth made up 11.7%.

Needs Attention

Death by suicide among children 15 to 19 years old is an indicator that stands separate from violent deaths among teens. The suicide rate and numbers of suicides in St. Charles County had increased for the two separate ten-year periods of data provided in Table 11. The rate increased from 8.4 per 100,000 in the 2003-2013 span of time to 11.4 per 100,000 covering 2008-2018. Twenty-three children, age 15-19, died by suicide in 2003-2013, whereas 32 deaths were attributed to this cause for 2008-2018. Among the comparative regions not including the state, St. Charles County had the second lowest rate during the first data period and had the second highest suicide rate during the 2008-2018 span. Self-injury trends, an indicator related to suicidal ideations, had also deteriorated within St. Charles County from 2007 to 2015 (see Table 41 and 42). Due to the lack of data with this indicator for the last few years, it is important to look at the students' ratings with the Missouri Student Survey on this topic.

Table 11: Death by Suicide, Children 15-19 years old, per 100,000

Regions	2003-13		2008-18		# Ch.	Rate Ch.
	#	Rate	#	Rate

Warren	2	8.6	1	4.4	-1	-4.3

Source: DHSS-MOPHIMS Community Data Profiles – Child Health

The 2020 Missouri Student Survey data is expected to be included with this report by the end of October, and trends will be provided to the community and its stakeholders in November.

Education (Appendix Tables 57 – 73)

Strengths

The St. Charles County high school graduation rate across the public school districts started at 88.7% in 2004, and improved to 92.9% in 2018, an increase of 3.8% (Table 58). This rate was 1.3% higher than the Missouri rate, and was the second highest among the comparative regions (second to Lincoln County at 94.9%). The total number of graduates reported for 2018 was 4,249. 2019 data for each school district was also available and reported through 2019 (Table 57). The 4-year cohort data showed an annual graduation rate range of 86.7 (St. Charles R-VI school district) to 97.0 (Francis Howell school district), with an average graduation rate of 94.1 (Table 59 and 60). This rate had increased steadily since

2004 for all of the school districts in St. Charles County, in addition to all but one showing positive 1-, 3-, and 5-year trends. The five public school districts reported 4,477 graduates for 2019.

Annual high school dropout rate across St. Charles County decreased from 2.6% of the total student population in 2004 to 1.3% in 2018 (Table 62), with a 44% decrease in the number of those dropping out to 236 from 421 in 2004 (Table 61). Comparative regional analysis shows that St. Charles County had the second lowest drop-out rate, and 0.5% less than Missouri's rate of 1.8% in 2018. Furthermore, the 1-, 3-, 5- and 10-year trends were all positive (Table 63).

Overall St. Charles County disciplinary incidents decreased by 52.3% from 2004 (875) to 2019 (417), with a rate decrease of 1% from 1.7% to 0.7% across all of the public schools in the county. By comparison, the state rate was 1.2 for 2019. Data was available by each school district, which showed a range of 0.4 (Wentzville) to 1.4 (St. Charles). Francis Howell and Orchard Farm reported a disciplinary rate of 0.7 per 100 students, with Fort Zumwalt at 0.8 out of 100 students. The number of incidents and type of disciplinary incident is available per school district and included in the tables available in the appendix. For St. Charles County overall, disciplinary incidents related to alcohol, drugs, tobacco, violence, and weapons either did not change or decreased since 2004 (Tables 64 and 65, plus individual school district data in Table 66 – 70).

The in-school suspension rate averaged across all of the St. Charles County public schools decreased from 0.2% of students in 2004 to 0.1% (rounded down) in 2019. There were 29 students who received an in-school suspension in 2019 compared to 128 in 2004, a decrease of 77.3% (Table 64).

The out-of-school suspension rate across the public school districts also decreased from 1.4% of students in 2004 to 0.7% of students in 2019. Overall, 388 students across all of the districts received an out-of-school suspension in 2019, in comparison to 734 in 2004, a decrease of 47.1% (Table 64).

Mixed Result

New data was included in this year's report regarding MAP testing proficiency for students in various grades. First, the percentage of St. Charles County 3rd graders who were proficient on the MAP test in English/language arts was 61.3 for 2018, an increase of 9.2% since 2011. St. Charles County had the highest proficiency rate among the comparative regions, including the state with 48.6% of 3rd graders noted as proficient. However, negative 1- and 3-year trends were present with the 3rd graders in St. Charles County (Table 71).

The percentage of St. Charles County 8th graders who were proficient on the MAP test in English/language arts was 61.1 for 2018, a decrease of 1.4% since 2011. Negative trends were also present for the 1-, 3-, and 6-year (5-year data set not available) comparison within the county. The positive aspect can be found by viewing the comparative regions, which shows that St. Charles County 8th grade students were at the highest among them, including the state (at 49% proficiency for 8th graders; Table 72).

The last indicator to report is the percentage of 4th graders who were proficient on the math portion of the MAP test for 2018. There were 59.5% of 4th graders who were proficient in 2011, which increased by 1.1% to 60.6% for 2018. Again, St. Charles County had the highest percentage of children who were proficient in math out of all of the comparisons, with the state at 45.8% of children who were proficient. The 1-, 2-, and 3-year trends, however, were negative and require attention (Table 73).

Needs Attention

None of the educational indicators fit this description.

Source: Missouri Department of Elementary and Secondary Education. Definitions: Number of students grades 9 through 12 enrolled in public schools that graduated within four years. The formula used to calculate the rate accounts for transfers in and out of a district (adjusted 4-year cohort graduation rate). Years indicated are school years; for example, 2015 indicates the 2014-2015 school year.

About the Consultant Who Prepared This

Cynthia Berry, Ph.D.

*BOLD, Berry Organizational and Leadership Development
3740 Forest Meadow Drive, Defiance, MO. 63341- 636-5444
Cynberry42@msn.com*

Cynthia Berry, Ph.D., is a Psychologist with a specialization in Industrial/Organizational, Personality and Experimental Psychology, and founded BOLD, Berry Organizational and Leadership Development, LLC in January of 2006. BOLD, LLC is a 100% woman-owned business registered with the State of Missouri.

She has over twenty-one years of experience in Human Resources, Organizational and Fund Development, Evaluation and Research including large-scale community needs assessments and customer/employee/stakeholder surveys, Psychometrics and Employee and Management Training. She has vast experience in organizational and community-based assessments allowing for guided strategic plan development complete with outcome measurement tools and procedures to match. Many of the community-based projects assess opinions, satisfaction and needs relating to a specific area of interest within a community.

BOLD is further strengthened by providing services for full organizational and program budget development, fund development and writing in-depth policies and procedures. She has worked with numerous not-for-profits, for-profits and government agencies involving strategic program planning and development, employee development, fundraising and/or fund development, survey/outcome development, board facilitation activities, and organizational assessments. Since 2007, Cynthia has personally raised over \$10 million dollars for many programs she has helped develop and implement. Furthermore, she has strengthened many not-for-profits with the development of measurement tools and processes to track outcomes, and the implementation of various quality improvement projects. Finally, she was an adjunct professor for the Evaluation of Programs and Services Master's level course at the George Warren Brown School of Social Work at Washington University from 2012 through 2019.
