Key Findings - 2004 through 2019/2021

This section of the report presents the key findings of the demographic information and the community indicators for the St. Charles County youth population, and in some cases, for the general population. A handful of tables and figures are presented in the narrative section, with the remaining tables that are referenced included in the Appendix. Due to spacing limitations, some years were not included in the tables, but are available in an Excel file for the CCRB.

The demographic information about the St. Charles County youth population is presented first to foster understanding of how to specialize or gear services, resources, and educational opportunities. After the demographic section, the community indicator data is presented in one of four categories based on the trends reported from 2004 through 2019 (and for 2020/2021 if data was available). These four categories are:

- Economic Well-being (page 6)
- Health – Physical (page 8)
- Health – Behavioral (page 9)
- Education (page 13)

Trends were analyzed per community indicator and classified as being an area that needs attention, shows a mixed result, or is considered a strength.

Community indicators identified as “Strengths” have data trends that are very promising and/or positive. Both long-term and short-term trends were evaluated to determine how an indicator has been performing in St. Charles County. In addition, an indicator could be perceived as a strength if the county performed better than the state and/or other comparative regions that are presented throughout this report. These are areas that should be recognized, duplicated, and replicated if underlying interventions/strategies can be identified that may have attributed to the positive impact.

Community Indicators labeled as a “Mixed Result” means that the county data was not conclusive as to the assessment of the outcome. For example, the long-term trend may be positive, but the 1-, 3-, and/or 5-year trends may be lagging. Mixed results could also be tied to a promising longitudinal trend for the indicator, while also demonstrating a struggling youth population in comparison to other local regions or with the state. Mixed results can shed light on community changes, interventions, processes, or policies that could be moving the mark, but require continued resources and services to remain on this positive trend and/or to move closer to the rates of comparative regions. In some cases, it may lead to research to understand other contributing factors to what is perceived as problematic in the community.

A community indicator that “Needs Attention” means that the data trends may have condensed or worsened over time, and/or the data were not comparable to local regions or the state. In addition, this might occur if the long-term trends had been relatively stable over time, but recent trends (last 1-5 years) were negative. These indicators need special attention, resources, and/or services to resolve.

A separate section of this report will be prepared for the Missouri Student Survey data relating to various behavioral health needs of St. Charles County students, once that data is released.

IMPORTANT NOTE ABOUT INTERPRETING DATA IN THE TABLES

Various tables will be presented in this report and in the Appendix. Many tables include a column with the heading “Diff.,” which means the difference between the first and last data point for the specified years provided. When “% Ch” is used, it means the percentage of change that has occurred over time with the numbers presented, typically from the first to the last data point for the specified years. Column headings for “1-YR”, “3-YR”, and “5-YR”, were used to show the percentage change in the most recent 1-year, 3-year and/or 5-year period of time. For many community indicators, colors were used to highlight the trends where green identifies a positive trend, and red identifies a negative trend.

St. Charles County, Missouri Population and Demographics (Appendix Tables 12 through 18)

The total population of St. Charles County, Missouri increased by 24.6% from 2004 (319,729) to 2020 (398,472). The St. Charles County youth population (under 18 years) increased in number by only 5.0% from 2004 (88,056) to 2020 (92,296). As of 2020, there were 4,444 additional youth under the age of 18 in comparison to 2004. Youth under 18 years in age made up 22.8% of the St. Charles County population in 2020 (Table 1 and 12).

Table 1: Population Numbers 2020 – Missouri and St. Charles County

	Missouri	St. Charles
Total Population	6,124,160	398,472
Child Population - under 18	1,371,429	92,500
Children -% of Population	22.3%	22.8%
Child Population - under 6	443,484	28,015
Children under 6 -% of population	7.2%	6.9%
Minority child population under 18	355,202	15,319
Percent minority children under 18	25.9%	16.6%
Minority child population under 6	119,741	4,799
Percent minority children under 6	27.0%	17.1%

Source: USDC, Bureau of the Census; Missouri Office of Administration, Division of Budget and Planning.

The percentage of the population who were minority children changed from 9.6% (8,424) in 2004 to 16.6% (15,319) in 2020 (Table 13). With an 81.8% increase in the number of minority children in this period of time, the youth population has become more diverse. Across all ages, 86.6% of the residents were white, 4.5% were black, 2.6% were Asian, 3.2% were two or more races, with 3.4% of the population Hispanic. Looking at Table 2 below, you will notice each of the age ranges below 19 years, had a smaller percentage that were white, and a larger percentage of its youth who were black, two or more races, and/or Hispanic.

Table 2: Numbers and Percentage of Races -Total Population and by Age (for youth) in St. Charles County, Missouri -2020

St. Charles	Total	White		Black		Asian		Two or More Races		Hispanic	
All Ages	398,472	34,5054	86.6%	18,068	4.5%	10,342	2.6%	12,687	3.2%	13,418	3.4%
Age 0 to 4	23,428	19,054	81.3%	1,235	5.3%	574	2.5%	1,592	6.8%	1194	5.1%
Age 5 to 9	25,960	21,784	83.9%	993	3.8%	642	2.5%	1,339	5.2%	1,311	5.1%
Age 10 to 14	27,066	21,228	78.4%	1,256	4.6%	841	3.1%	2,370	8.8%	1,474	5.4%
Age 15 to 19	25,763	21,437	83.2%	1,400	5.4%	483	1.9%	1,165	4.5%	1,237	4.8%

Source: U.S. Census Bureau; Population Division. For population estimates, please note that the individuals identifying as more than one race were accounted for more than once with the original data source. Per year, the percentage across all the racial categories does not total to 100% due to this duplicate information.

There were 16.1% of children living in single parent households for the five-year period covering 2016-2020, a decrease of 2.1% since 2003-2007 (Table 15). This indicator showed a substantial 3- and 5-year decrease as well. The number of children in single parent households decreased by 9% (Table 14) from 16,460 (2003-2007) to 14,921 (2016-2020). The peak year for the number of children in single parent households was 2018 with 21,161. The 3- and 5-year trends show a 28% and 26% decrease as well. However, the St. Charles County rate is 8% less than Missouri's rate, and well below all comparative regions shown in Table 16.

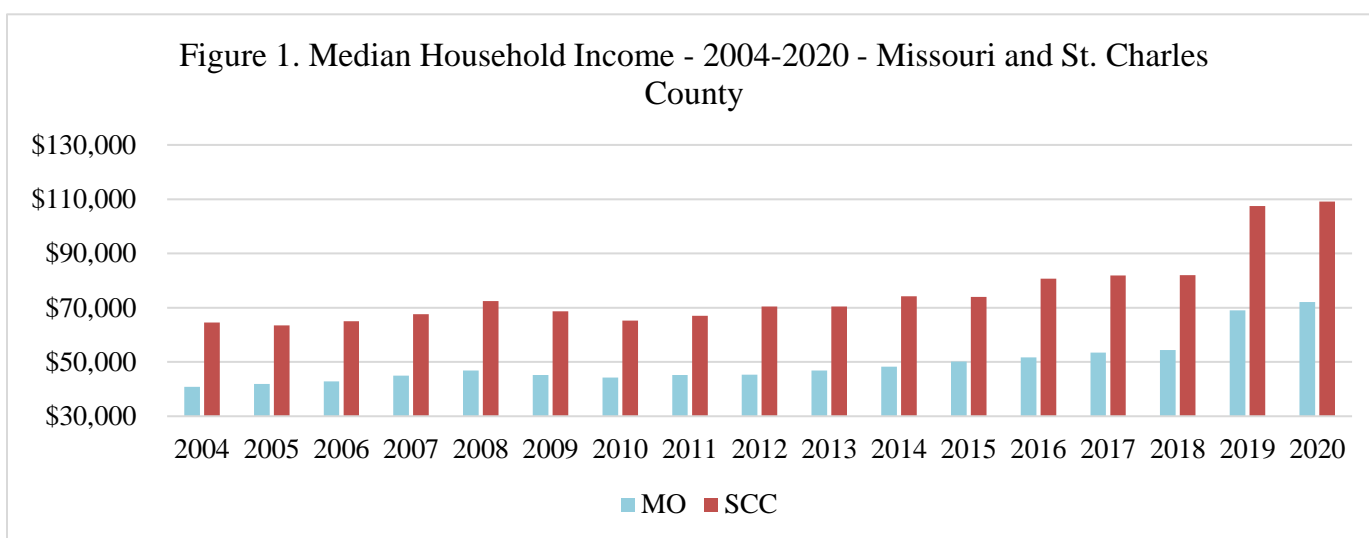

Adult unemployment increased by 0.7% since 2004 (4.5% in 2004) and was at 5.2% for 2020. The adult unemployment rate was the lowest in this period of time in 2018 but has doubled in two years. However, the unemployment percentage was 0.8% lower than the state's rate at 6.1% and was the lowest rate among all of the comparative regions. All regions shown in Table 3 experienced the same trend since 2018.

Table 3: Adult Unemployment Percentage

Regions	2004	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	Diff.	1-YR	3-YR	5-YR
Missouri	5.8%	9.4%	8.4%	6.9%	6.7%	6.1%	5.0%	4.5%	3.8%	3.2%	3.3%	6.1%	0.3%	2.8%	2.3%	1.1%

Source: Missouri Department of Economic Development, Division of Employment Security.

The St. Charles County median household income in 2020 was \$109,118, an increase of 69% since 2004; 33% since 2017 (3-year) and 47% since 2015 (5-year). The county’s median household income was \$37,085 greater than the state’s median household income of \$72,033 in 2020 (Figure 1 and Table 17). The 3- and 5-year trends between the county and the state increased at a comparable pace.

Source: SAIFE

Viewing the trends for various disability types among the youth in St. Charles County is critical for proper planning and allocation of resources (Table 18). Below are the disability types prioritized by their percentage increase over time. Overall, there were 8,997 children with at least one of the disabilities listed in Table 18, which increased by 6.1% from 2007 to 2021.

1. Autism trends continued to surge in the public-school districts, with a 254% increase from 2007 to 2020. There were 1,048 children with an Autism diagnosis in the public schools for 2021.
2. The county experienced an 91% increase in the number of children with other health impairments, which included 2,092 youth for 2021.
3. Children with emotional disturbances had increased by 53.3% since 2007, and for 2021 represented 756 youth.
4. The fourth highest increase in disability types in youth was intellectual disabilities; an increase of 47.9% since 2007 representing 386 children for 2021.
5. There was a 40.7% increase in the number of children who had multiple disabilities with 114 noted for 2021.
6. Young children with a developmental delay, which includes children aged three through pre-kindergarten (typically five-year old children), increased by 20.5%. There were 1,076 young children with a developmental delay.

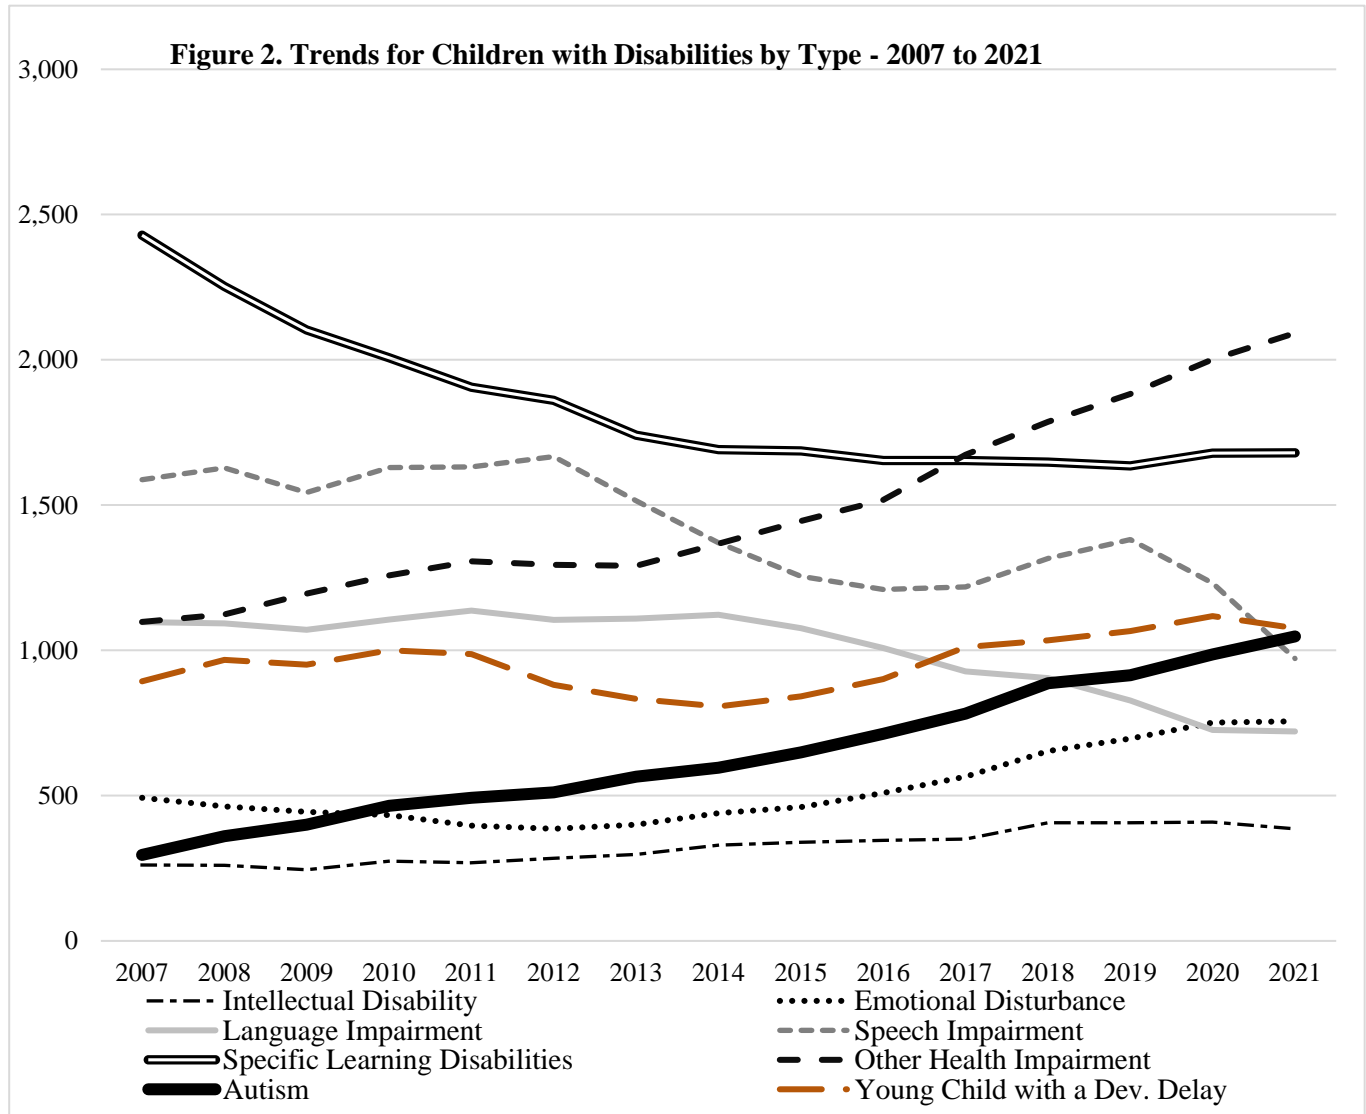

There were many disability categories that demonstrated decreased trends from 2007 to 2021 as well. The decreases were found with hearing impairments (-44.7% to 73 children), speech impairment (-38.8% to 972 children), language

impairment (-34.3% to 721 children), specific learning disabilities (-30.8% to 1,680 children), orthopedic impairments/deaf and blindness/traumatic brain injury (-19.3% to 46 children), and visual impairments (-7.1% to 26 children). Beyond the generalized disability type categories including other health impairment, the most prevalent disability type was “specific learning disabilities” with 1,680 children (2021); although this type decreased over time by 31%. This was followed by these diagnoses in order: youth with a developmental delay (1,076), autism (1,048), speech impairment (972), emotional disturbance (756), and language impairment (726). The top eight diagnoses/categories are shown in Figure 2. Enrollment figures are also shown in Table 4 for St. Charles County to allow for this comparison.

Table 4: St. Charles County School Enrollment by Grade Level – 2020

SCHOOL ENROLLMENT - 2020	St. Charles #	St. Charles %	Missouri #	Missouri %
Population 3 years and over enrolled in school	101,524		1,459,812

Economic Well-being (Appendix Tables 19 -31)

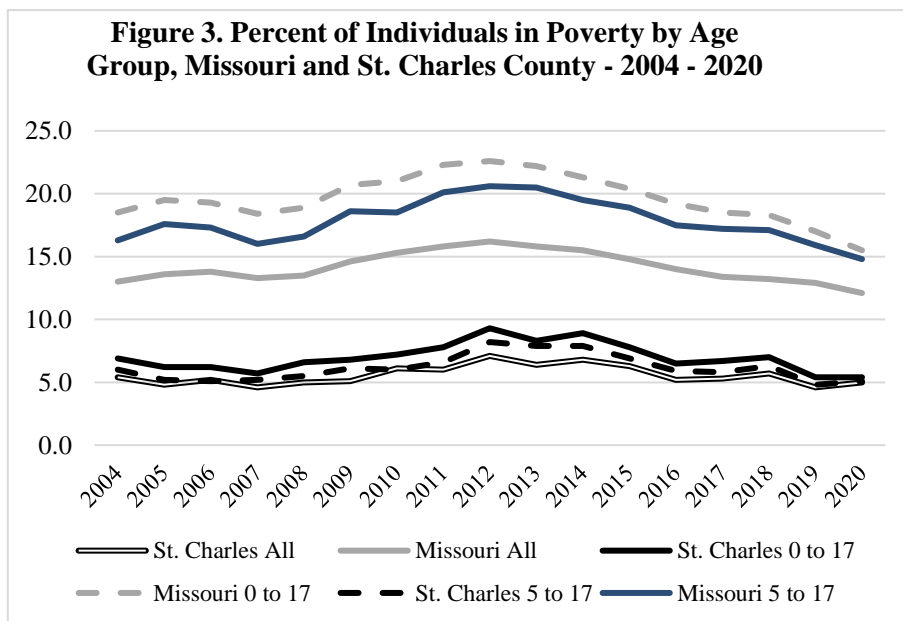

Strengths

The number of individuals in poverty for the general population increased 25% from 17,880 in 2004 to 20,179 in 2020 (Table 19). The poverty rate decreased by 0.4% since 2004 and demonstrated positive 3- and 5-year trends (Table 20). By comparison, the state rate of 12.1% was more than double the county rate for 2020, at 5.0%.

The youth population age 0-17 increased by 6.5% since 2004 (90,933 = youth population estimate for 2020; Tables 19 and 20 and Figure 3). The number of youths in poverty, ages 0-17, decreased by 17% from 5,879 in 2004 to 4,879 in 2020. 5.4% of the youth population was in poverty in 2020 in comparison to 6.9% in 2004. This represents a decrease of 1.5% in the percentage of youth aged 0-17 in poverty (as a percentage of the youth population). The poverty rate for youths aged 5-17 also decreased slightly from 6.0% (2004) to 5.1% (2020), representing 3,475 youth. This poverty rate had positive 3- and 5-year trends as well. All individuals in poverty and youth 5-17 years of age had negative 1-year trends, but they were minimal. Similar to the general population poverty trends, the poverty rate for youth 5-17 (5.4% for 2020) decreased by 3.1% since 2012, the year where poverty was at its highest.

In 2004, 13.3% of the public-school student population (6,660 students) were enrolled in the free/reduced price lunch program in comparison to 19.6% (11,321) in 2019 (Table 24). This represents a 70% increase in the number of students enrolled since 2004 and a 6.3% increase in the percentage of students who were enrolled in the free/reduced price lunch program. While this may initially appear as an indicator that needs improvement, other data that was gathered would indicate that this is a strength. First, the county's percentage of students enrolled was 19.6% for 2019 in comparison to the state at 50%. In addition, while the rate had increased by 6.3% in the 16-years of data, the 1-, 3- and 5-year trends were positive and had improved at a rate faster than the state. Please note that the databases that provide this data stopped updating it past 2019 for the state and counties, therefore the remaining data reviewed for students enrolled in the free/reduced price lunch were from the Department of Elementary and Secondary Education (DESE). Further, during COVID, the federal government provided all schools with free breakfasts and lunches for their student population regardless of socioeconomic status. Due to the variation of data within each school district, this data has been presented in Table 25. The school district with the highest percentage of students eligible for this program was St. Charles at 28.6% for 2021, although their 1-, 3-, and 5-year trends were positive.

The second highest percentage was found at Orchard Farm at 20.3% for 2021, followed by Fort Zumwalt at 15.4%, Francis Howell at 13.7%, and last, Wentzville at 12.9%. All school districts had positive 1-, 3-, and 5-year trends.

Source: SAIPE

The number and percentage of children in families receiving food stamps increased slightly from 2004 to 2020. In 2020, there were 10,304 children in families receiving food stamps, a change of 12% from 9,229 children in 2004 (Table 26). As a total percentage of children, it increased from 10.5% in 2004 to 11.1% in 2020, an increase of 0.6% (Table 27). Similar to the previous indicator, children in families receiving food stamps may initially appear to be a mixed trend. However, a comparative analysis and the more recent trends portray a different story. First, the percentage of children in families receiving food stamps had positive 3-, and 5-year trends. This percentage was the highest in 2012 at 15.5%, a

decrease of 4.4% in eight years. Furthermore, Missouri reported 30.2% of children in families who received food stamps in 2020, which was almost three times higher than St. Charles County at 30.2%. The only down trend can be seen with the 1-year changes which showed a 0.2% increase in the percentage of St. Charles children in families who receive food stamps.

Food Insecurity data was updated only through 2019 due to the availability of data, so based on a review of the 2010 to 2019 data, there was a 58% decrease from 16,070 youths considered “food insecure” to 6,760 for 2019 (Table 28). The percentage improved by 10.3% from 17.6% in 2010 to 7.3% in 2019 (Table 29). This indicator experienced positive 1-, 3-, and 5-year trends. By comparison, 14.8% of Missouri children who were food insecure for 2019, which was more than double the county at 7.3%.

An indicator used to predict the risk of becoming homeless is if homeowners and/or renters spend more than 30% of their income on their gross household costs, also known as cost-burdened households. Data is presented in Table 5 to show comparisons across four five-year periods for St. Charles County and Missouri. Over time, the percentage of housing units without a mortgage where 30% or more of their income is spent on gross household costs remained relatively the same for Missouri (11-12%) and St. Charles County (9-11%). A similar trend was found with the percentage of occupied units paying rent for Missouri (ranged from 45-49%) and St. Charles County (ranged from 40-44%). The most recent 5-year data showed St. Charles County at the lowest percentage for all three groups of housing types.

Table 5: Percent of Housing Cost-burdened Households – Pay 30% or more of Income on Gross Household Costs

Housing Types	2006-2010		2011-2015		2014-2018		2016-2020	
	MO	SCC	MO	SCC	MO	SCC	MO	SCC
Housing units with a mortgage	29%	27%	27%	23%	23%	19%	21%	18%
Housing units without a mortgage	12%	10%	12%	11%	12%	10%	11%	9%
Occupied Units Paying Rent	47%	44%	49%	43%	46%	42%	45%	40%

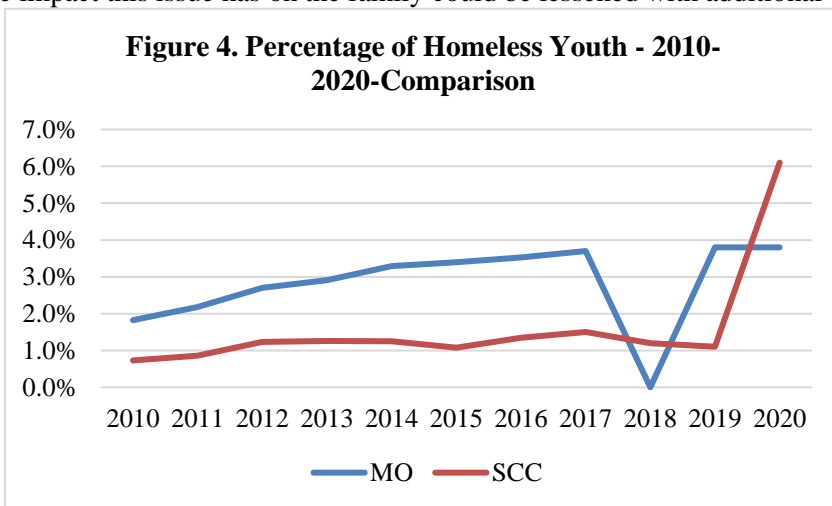

Source: American Community Survey, 5-year estimate, Housing Characteristics.

A reported 40% of St. Charles County renters paid 30% or more of their income on their gross household costs covering 2016-2020; 32% spent 35% or more with 8% of SCC renters paying between 30-34.9%. For Missouri, this was 45% (Table 30). This means approximately 10,269 renter households were at risk of homelessness in St. Charles County. In 2020, 18% of St. Charles County owners with a mortgage spent 30% or more in comparison to 21% of Missouri owners. This represents an additional 15,943 households who were at risk of homelessness in St. Charles County in 2020. In addition, 9% of St. Charles County homeowners without a mortgage spent 30% or more of their income on household costs, putting 3,027 homeowners without mortgages at risk of homelessness (Table 31). In all but one comparison (with Montgomery County at 19.6%), St. Charles County residents were in a better position to avoid homelessness due to their lower percentages of being cost-burdened, but the impact this issue has on the family could be lessened with additional education, services, and resources related to housing costs.

Mixed Results

Youth Homelessness, as measured annually in the public-school districts, increased in three of the five districts except St. Charles R-VI and Wentzville R-IV (Table 21). Francis Howell school district showed positive 3- and 5-year improvements, while Fort Zumwalt school district demonstrated positive 1- and 3-year trends. Orchard Farm had negative long-term trends, in addition to negative short-term trends for the 1-, 3-, and 5-year data points.

As of August 1, 2022, the county data was not

Source: Department of Elementary and Secondary Education

accurate through local data sources therefore these trends can only be viewed through 2019. In the county overall, the percentage of homeless youth increased from 0.7% in 2010 to 1.1% in 2019, which represents a very low percentage of the youth population (Table 22). For 2019, the county’s percentage of homeless youth (1.1%) was less than one-third of the State’s at 3.8%. The number of homeless youths in the county increased 66%; from 402 in the 2009-2010 count to 668 in the 2019-2020 count (Table 23).

Needs Attention

None of the economic well-being indicators were placed in this section.

Health – Physical (Appendix Tables 32 – 39)

Strengths

Infant mortality decreased in number by 27% since the 2000-2004 data collection period (142 to 103; Table 38). The infant mortality rate also decreased from 6.5 out of 1,000 births in 2004 to 4.8 out of 1,000 births in 2020 (Table 39). The State rate was 6.1 per 100,000 infants in 2016-2020. While the 3- and 5-year trends demonstrated a slight declining trend, the rate steadily improved over time, showed a positive 1-year trend, and was significantly less than all but one comparative region (Table 6).

Table 6: Infant Mortality Rate per 1,000 Live Births

Regions	2006-2010	2007-2011	2008-2012	2010-2014	2011-2015	2012-2016	2013-2017	2014-2018	2015-2019	2016-2020	Diff.	1-YR	3-YR	5-YR

Source: Missouri Department of Health and Senior Services. Definitions: Number of deaths to infants under one year of age. Data were aggregated over five-year periods in order to provide more stable rates. Rate is per 1,000 live births.

Mixed Results

The number of child deaths (ages 1-14) increased by 529% from 2006 to 2020, a change in the number of deaths from 7 in 2002-2006 to 44 in 2016-2020 (Table 34). Child deaths, ages 1-14, increased from a rate of 2.0 out of 100,000 youth in 2002-2006 to 10.0 out of 100,000 youth in 2016-2020; more than five times the rate in the first period of time stated (see Table 35). It is important to note that the 1-, 3-, and 5-year trends improved, and St. Charles County’s rate was significantly less than the state rate at 15.9, and all comparative regions for 2016-2020 (Table 7).

Table 7: Child Deaths, ages 1-14 – Comparative Regions

Regions	2010-2014	2011-2015	2012-2016	2013-2017	2014-2018	2015-2019	2016-2020	Diff.	1-YR	3-YR	5-YR

The number of violent teen deaths (age 15-19) increased by three or 9% from 35 in 2000-2004 to 38 in 2016-2020 (Table 36). Violent deaths, ages 15-19, started at 31.3 deaths per 100,000 youth in 2000-2004, and for 2016-2020 decreased to 29.5 per 100,000 youth, a rate decrease of 1.8 (Table 37). On the positive side, St. Charles’ rate was significantly lower than all comparative regions with the exception of Warren County, and well below the state rate of 56.5 for 2016-2020 (Table 8). While the 1-year trend was positive, the 3-, 5-, and 10-year trends were negative for St. Charles County.

Table 8: Violent Teen Death Rate, Age 15-19 – Comparative Regions

Regions	2010-2014	2011-2015	2012-2016	2013-2017	2014-2018	2015-2019	2016-2020	Diff.	1-YR	3-YR	5-YR

Source: Missouri Department of Health and Senior Services. Definitions: Number of deaths from homicides, suicides, motor vehicle crashes, and other accidents to teens ages 15 to 19. Data were aggregated over five-year periods to provide more stable rates. Rate is expressed per 100,000 teens.

Needs Attention

There was a 19% increase in the number of infants born with low birthweight of 1,389 in 2000-2004 (5-year span) to 1,655 in 2016-2020 (Table 32). The percentage of infants classified with low-birth weight increased by 1.2%, from 6.4% in 2000-2004 to 7.6% in 2016-2020 (Table 33). This percentage for the county was lower than the state at 8.7%, with all 1-, 3- and 5-year trends being negative.

Health – Behavioral (Appendix Tables 40 – 58)

Strengths

Births to teens, age 15-19, had a rate decrease from 20.6 out of 1,000 births in 2004 to 6.3 out of 1,000 births in 2020 (Table 41). In 2020, there were 80 births to teens, age 15 – 19, in comparison to 234 births to teens matching this age range for 2004, a decrease of 66% (Table 40). The 1-, 3-, and 5-year trends starting from 2020 were positive for both the reported numbers and rates of teen births. In comparison to all regions shown in Table 9, St. Charles County ranged from being one-half to one-third of every region’s rate including the State rate at 18.8 out of 1,000 youth (age 15-19).

Table 9: Teen Birth Rate – Age 15-19 – Per 1,000 Youth – Comparative Regions

Regions	2014	2015	2016	2017	2018	2019	2020	Diff.	1-YR	3-YR	5-YR

Juvenile law violation referrals for youth in St. Charles County, ages 10-17 improved from 2004 to 2020. In 2004, it was a rate of 48.2 out of 1,000 youth, ages 10-17 (1,959 youth), and decreased to a rate of 12.9 out of 1,000 applicable youth in 2020 (representing a 71% decrease in the number of youths with law violation referrals, impacting 566 youths; see Table 50 and 51). St. Charles County had the lowest referral rates among all regional comparisons (others ranged from 14.9 to 18.9 out of 1,000 youth) including Missouri’s rate of 16.8 out of every 1,000 juveniles. In addition, the 1-, 3-, and 5-year trends reported in Table 51 were all positive within this county.

Positive Trends within Juvenile Law Offenses and Court Referrals (reported for indicators with numbers greater than 30)

All of the offenses that fall under “law” offenses, which includes violent, alcohol, and drugs offenses, decreased in number by 56% or more from 2004 to 2020. There were 208 violent offenses noted in 2020, followed by 58 drug offenses, and 27 alcohol offenses. The 1-year trend for alcohol offenses was the only negative trend found (Table 52).

Within “status” offenses, truancy, runaway/absent from home, and injurious behavior decreased by 14% or more since 2004. “Runaway/absent from home” was the most prevalent status offense in St. Charles for 2018 at 133 offenses but decreased by 58% since 2004. “Beyond parental control” increased from 0 to 2 since 2020, but showed positive 1-, 3-, and 5-year trends.

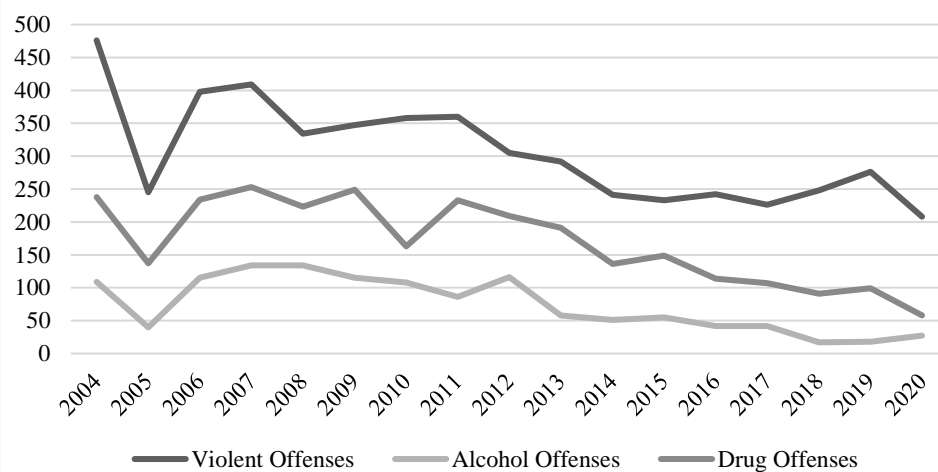

Within the “abuse/neglect/custody offenses,” neglect offenses decreased by 20% since 2004, with 141 reported custody offenses for 2020.

Negative Trends within Juvenile Law Offenses and Court Referrals

Beyond Parental Control which falls within the “status” offenses increased by 200% since 2004 (from 0 to 2, so interpret with caution) with 2 reported offenses for 2020. Truancy demonstrated negative 1- and 3- year trends, and therefore this should receive additional attention. Abuse offenses increased by 7% since 2004; from 14 to 15 covering the 15-year span of time. Custody disputes also increased by 53% since 2004; from 19 to 29 for this same 15-year period. Neglect had modest 1- and 3-year declines and should be monitored.

The number of children entering/re-entering state custody increased 10% from 105 in 2004 to 115 in 2020, with a rate of 1.2 per 1,000 youth in 2004 in comparison to a rate of 1.2 per 1,000 youth in 2020 (Table 48 and 49). This indicator was

Figure 5. Juvenile Law Offenses - St. Charles County - 2004 to 2020

Source: Missouri Department of Social Services.

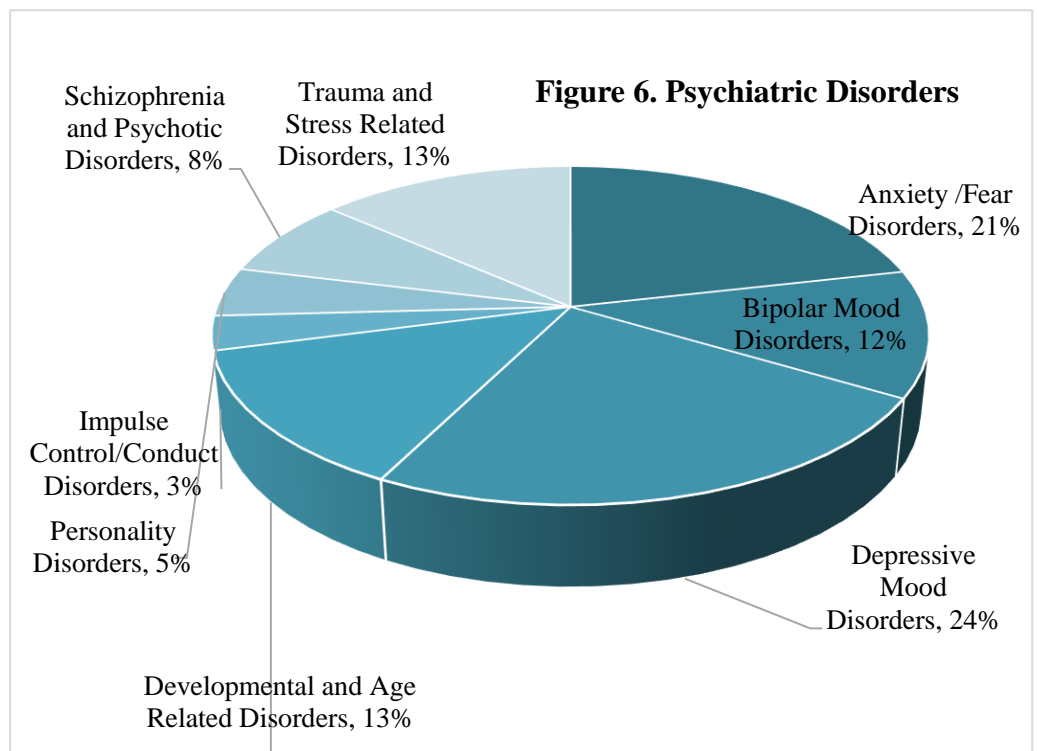

viewed as a strength since the rate did not change in more than 16 years, in addition to the positive 3- and 5-year trends or from its height in 2011 and 2012 at 1.8 per 1,000 children. Another indication of this being a strength was that the state rate of 4.6 per 1,000 was three times more than County rate of 1.2 in 2020. The data was slightly different with the status report as the source and shows that 50 out of the 108 out-of-home placements had the children removed for reasons outside of alcohol and drug use, with 50 placements made related to parental drug use. There were six cases attributed to parental alcohol use (Table 52).

Data was included on the number of youth (under 18) in St. Charles County that were admitted to a substance abuse treatment program through the Division of Behavioral Health (Table 47). There were 32% less youth under 18 years old admitted to a substance abuse treatment program in 2020 (65) than in 2009 (96). Youth made up 7.2% of those admitted in 2020; in 2009, youth made up 11.7%.

There is a variety of data available from the Division of Behavioral Health that relates to children’s mental and behavioral health. Table 54 provides the number of youths who received psychiatric services from this source. For clients under 6 years old, 27 were served in 2017, which increased 4% to 28 who were served in 2020. All remaining age groups decreased from 2017 to 2020. The children in the 6-9 years old range decreased 15%; from 236 to 201 covering the same years. Clients 10 to 13 years old, decreased by 12%; from 371 in 2017 to 328 in 2020. There were 340 children who were 14 to 17 years old served in 2017, which decreased by 18% to 278 children served in 2020. For all clients served by the Division of Behavioral Health, there was a 19% decrease from 2,805 in 2017 to 2,265 served in 2020. Last, all of the 1-year trends were positive.

Mixed Results

The breakdown of the psychiatric disorders shown in Figure 6 (see Table 53) demonstrates that the majority of the diagnoses for the general population as of 2020 were depressive mood disorder (24%), anxiety/fear disorders (21%), trauma/stress-related disorders (13%), developmental/age-related disorders (13%), bipolar mood disorders (12%), with the remaining disorders present with 10% or less of the client sample. Trauma and stress related disorders showed the largest increase in those served for the 1-year trend (49%) and the 3-year trend (43%). Anxiety/fear disorders rose in both the 1- (37%) and 3-year (24%) trends, with 1,056 individuals served in 2020. Both types of diagnoses relate to the fear experienced by many individuals and communities due to COVID-19. Bipolar mood disorders experienced a reduction in the number of those served in both the 1-year span (3%) and 3-year span (22%).

Source: Status Report on Missouri’s Substance Use and Mental Health; Division of Behavioral Health, Missouri.
 Note: Individuals who received psychiatric services had one of the disorders listed in the next table.

A variety of data is available for child abuse and neglect cases in St. Charles County. A majority of child abuse and neglect data (see Tables 55 and 57) from 2005 to 2021 showed a surge in the number of reported incidents across type (23%), the number of substantiated incidents (9.9%), the number of incidents needing family assistance (19.5%), the

number of unsubstantiated incidents (5.9%), and “other” incidents (348.8%), with similar patterns emerging for the number of children involved in child/abuse and neglect substantiated incidents. In 2021, 260 children in St. Charles County had substantiated cases of child abuse and neglect, an increase of 13.5% since 2005, and linked to 189 total incidents (some incidents involved multiple children in the family). 1,572 children required some level of family assistance, which had grown by 17.1% since 2005 at 1,342 children. While long-term trends were negative, the 1-, 3-, and 5-year substantiated trends for both the number of substantiated incidents and children improved by 1 or 28%. Furthermore, the rate of substantiated children per 1,000 had decreased from 3.9 in 2016 to 2.75 per 1,000 children in 2021. There was a slightly negative trend for the total children reported per 1,000 for 2021 (from 27.98 in 2020 to 28.67 in 2021).

Table 10: Rate of Substantiated Children per 1,000 and Reported per 1,000 for St. Charles County, Missouri – 2015 to 2021

Rate	2015	2016	2017	2018	2019	2020	2021	Diff.	1-YR	3-YR	5-YR
Substantiated children per 1,000	2.79	3.91	3.12	3.75	2.66	2.89	2.75	-0.04	-0.14	-1.00	-1.16
Total children reported per 1,000	34.12	36.86	35.75	36.61	31.71	27.98	28.67	-5.45	0.69	-7.94	-8.19

Source: Missouri Department of Social Services Annual Reports from 2005 to 2019.

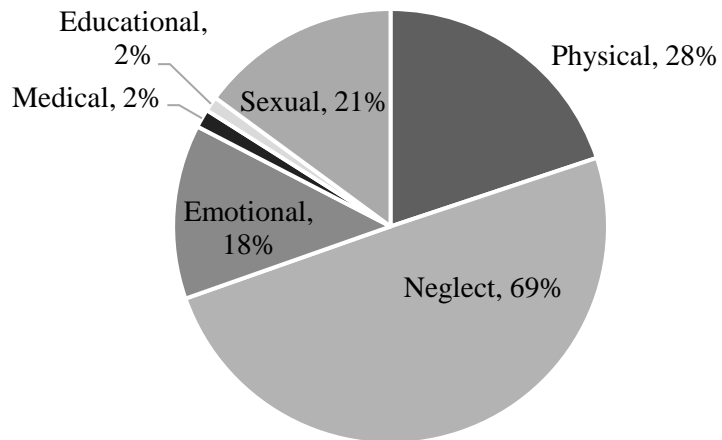

Children involved in neglect cases represented 69% of the total type for substantiated child abuse and neglect cases in 2021 (Table 56 and 58). There were 180 children involved in the neglect type, out of the 260 total children reported in 2021. Neglect incidents increased by 56.6% since 2005; from 76 to 119 incidents. The number of children involved in a neglect case increased by 275%; from 48 in 2005 to 180 in 2021. The 1-year trends were also negative. However, the 3-, and 5-year trends were positive for neglect incidents and children involved in neglect.

The number of children involved in physical abuse made up 28% of the total types; the second highest type of abuse experienced in 2021. There were 64 substantiated incidents that occurred in 2021, which involved 72 children. The number of physical abuse incidents and children increased since 2005, with the negative 1-, 3-, and 5-year trends.

The number of children involved in sexual abuse cases made up 21% of the total number of substantiated children for 2021, the third highest type experienced by children. Over this period of time, substantiated sexual incidents decreased by 1.9% (from 52 in 2005 to 51 in 2021). Sexual abuse involved 54 distinct children in 2021, which represented a decrease of 3.6% since 2005 (see Tables 53 and 54). Furthermore, the 1- and 3-year trends were positive for the sexual abuse category.

Emotional maltreatment was cited in 27 incidents, impacted 47 children for 2021, and experienced the largest increase among all of the categories over time. Since 2005, emotional maltreatment incidents increased 900%, with the number of children increasing by 1,467% (from 3 to 44). The number of children affected by emotional maltreatment made up 18% of the total number of substantiated children. Due to the small sample size, findings should be interpreted with caution.

Figure 7. Type of Abuse/Neglect by Number of Substantiated Children - 2021

Source: Missouri Department of Social Services Annual Reports from 2005 to 2021.

Medical incidents were recorded in four (4) situations involving five (5) children with a 56% decrease in incidents and 44% decrease in number of children involved since 2005. This type made up only 2% of the number of children involved in substantiated abuse/neglect for 2021. However, with such a small sample size, findings should be interpreted with caution.

Educational neglect incidents were substantiated for four children in 2021, with three distinct incidents. Trend analysis is not warranted for such a small sample size, which has shown little change over time.

Death by suicide among children 15 to 19 years old is an indicator that stands separate from violent deaths among teens. The suicide rate and numbers of suicides in St. Charles County increased from 8.4 per 100,000 in the 2003-2013 span of time to 11.4 per 100,000 covering 2008-2018. However, the suicide rate decreased in the 2009-2019 period of time to 10.3 out of 100,000 youth. Twenty-three children, age 15-19, died by suicide in 2003-2013, whereas 29 deaths were attributed to this cause for 2009-2019. Among the comparative regions not including the state, St. Charles County had the second lowest rate during the first data period and had the third highest suicide rate during the 2009-2019 span. Self-injury trends, an indicator related to suicidal ideations, had also deteriorated within St. Charles County from 2007 to 2015 (see Table 45 and 46; no new data available). Due to the lack of data with this indicator for the last few years, it is important to look at the students' ratings with the Missouri Student Survey on this topic when it becomes available.

Table 11: Death by Suicide, Children 15-19 years old, per 100,000

Needs Attention

None of the behavioral health well-being indicators were placed separately in this section, but may have been identified as a sub-area that needs attention.

Education (Appendix Tables 59 – 79)

Strengths

The St. Charles County high school graduation rate across the public-school districts started at 88.7% in 2004, and improved to 94.7% in 2020, an increase of 6.0% (Table 60). This rate was 3.4% higher than the Missouri rate and was the second highest among the comparative regions (second to Lincoln County at 95.4%). The total number of graduates reported for 2020 was 4,264. 2021 data for each school district was also available and reported (Table 61). Based on this information, there were 4,478 graduates in 2021 across the five public school districts. The 4-year cohort data showed an annual graduation rate range of 84.2 (St. Charles R-VI school district) to 97.6 (Orchard Farm R-V school district), with an average graduation rate of 93.5 (Table 61 and 62). This rate had increased steadily since 2004 for all school districts in St. Charles County except for St. Charles R-VI, which also showed negative 1-, 3-, and 5-year trends. An additional two school districts reported negative 1-year trends, which may be due to the impact of COVID-19 on credits needed to graduate.

The annual high school dropout rate across St. Charles County decreased from 2.6% of the total student population in 2004 to 0.6% in 2020 (Table 64), with a 74% decrease in the number who dropped out to 108 from 421 in 2004 (Table 63). Comparative regional analysis shows that St. Charles County had the second lowest drop-out rate, and 0.7% less than Missouri's rate of 1.3% in 2020. Furthermore, the 1-, 3-, 5- and 10-year trends were all positive (Table 65). The dropout rates for the public school district show positive numbers and rates over time, but all of them had negative 1-year trends from 2020 to 2021, most likely relating to the impact of COVID-19.

Overall, St. Charles County disciplinary incidents decreased by 73.8% from 2004 (875) to 2021 (229), with a rate decrease of 1.3 from 1.7 to 0.4 across all public schools in the county. Data was available by each school district, which showed a range of 0.2 (Wentzville) to 0.9 (St. Charles). Fort Zumwalt and Orchard Farm reported a disciplinary rate of 0.5 per 100 students, with Francis Howell at 0.4 out of 100 students. The number of incidents and type of disciplinary incident is available per school district and included in the tables available in the appendix. For St. Charles County overall, disciplinary incidents related to alcohol, drugs, tobacco, violence, and weapons either did not change or decreased since 2004 (Tables 69 and 70, plus individual school district data in Table 71 – 75).

The in-school suspension rate averaged across all St. Charles County public schools decreased from 0.2% of students in 2004 to 0.0% (rounded down) in 2021. There were 14 students who received an in-school suspension in 2021 compared to 128 in 2004, a decrease of 89.1% (Table 69).

The out-of-school suspension rate across the public-school districts also decreased from 1.4% of students in 2004 to 0.4% of students in 2021. Overall, 213 students across all districts received an out-of-school suspension in 2021, in comparison to 734 in 2004, a decrease of 71.0% (Table 69).

Mixed Results

Data was included in this year's report regarding MAP testing proficiency for students in various grades. First, the percentage of St. Charles County 3rd graders who were proficient on the MAP test in English/language arts was 62.6 for 2019, an increase of 10.5% since 2011. St. Charles County had the highest proficiency rate among the comparative regions, including the state with 48.6% of 3rd graders noted as proficient. However, negative 3- and 4-year trends were present with the 3rd graders in St. Charles County (Table 77).

The percentage of St. Charles County 8th graders who were proficient on the MAP test in English/language arts was 60.3 for 2019, a decrease of 2.2% since 2011. Negative trends were also present for the 1-, 3-, and 4-year (5-year data set not available) trend data within the county. The positive aspect can be found by viewing the comparative regions, which shows that St. Charles County 8th grade students were at the highest, including the state at 47.3% proficiency for 8th graders (Table 78).

The next indicator is the percentage of 4th graders who were proficient on the math portion of the MAP test for 2019. There were 59.5% of 4th graders who were proficient in 2011, which increased by 1.0% to 60.5% for 2019. Again, St. Charles County had the highest percentage of children who were proficient in math out of all comparisons, with the state at 46.8% of children who were proficient. However, the 1-, 3-, and 4-year trends were negative and require attention (Table 79).

Proportional Attendance rates were gathered for the first time to include in this report, with this information provided by various racial categories, students with an IEP, and those enrolled in the free/reduced lunch program (Table 76). The school district with the highest attendance rates in 2021 was Orchard Farm (90.3%) and the lowest was Francis Howell (76.5%). Within each school district, the lowest attendance rate was found with students who were enrolled in the free/reduced lunch program which ranged from a high of 80.1% in Orchard Farm to a low of 66.0% in Wentzville.

Needs Attention

None of the education indicators were placed in this section.

Note: Diff = Represents the difference between the earliest and latest points of data available for the indicator.

** % Ch. = Represents the percentage change in the number shown from the earliest and latest points of data available for the indicator.

Source: Missouri Department of Social Services; Missouri Office of Administration. Definitions: Number of referrals to juvenile courts in Missouri for acts that would be violations of the Missouri Criminal Code if committed by an adult. The count represents separately disposed court referrals, not individual youth. Rate is expressed per 1,000 youths ages 10 through 17. Data for 2011 removed due to spacing on paper.
